

## **Astor Group - Successful testing in a live environment with Astor IV**

**Scandinavian Astor Group AB (publ) ("Astor Group" or the "Company") is pleased to announce that its subsidiary My-Konsult AB ("My-K") has successfully completed tests in a live environment with the radar jamming system Astor IV. The tests were conducted against a radar station under the auspices of FMV with the aim of measuring output power, sensitivity, and a selection of jamming techniques. The evaluation of Astor IV is done as a step towards delivery of the system to My-K's French partner, the red air missions company SDTS.**

*"This is a major step in the development of Astor IV, which through strategic investments and several years of development has evolved into a system that can meet the needs of modern military defense. We are pleased to have confirmed that the system delivers as expected in a live environment and look forward to completing the FAT, delivering the system for assembly and then starting the flight tests in France" comments Odd Werin, CEO of Astor Group.*

Astor Group's subsidiary, My-Konsult, has an established cooperation with the French red air missions company SDTS. The cooperation between My-K and SDTS includes three phases - integration, demonstration and in-service, which aims to deliver reliable and advanced solutions for airborne Electronic Warfare. Astor IV is an advanced airborne Electronic Warfare solution for radar jamming that has been developed over several years to meet the needs of modern military defense. As part of the cooperation with SDTS, prior to the delivery of Astor IV to France, My-K has recently conducted successful tests in a live environment with Astor IV as part of a FAT (Factory Acceptance Test) before planned deliveries in May. The system was tested against an FMV radar station to measure power output, sensitivity and a selection of jamming techniques.

*"We at SDTS, are pleased to hear that our partner for the aircraft integration of Astor IV, My-Konsult, have had successful testing which is a key milestone before the Operational Flight Test Campaign that starts in June with French Air Force and French Navy aiming to demonstrate in flight the readiness and the performances of the system.", - Ivan Volpoet, Astor IV Program Manager at SDTS.*

The aim is that SDTS will be able to offer advanced airborne Red Air missions Electronic Warfare solutions in its service catalog while My-Konsult will have the opportunity to sell serialized systems tested in France to SDTS, authorities in France and other target aircraft operators outside France. The next step is to finalize the FAT and then deliver an Astor IV system for flight tests to France in late spring.

### **More information about SDTS**

For many years now SDTS has been offering Air training services to French Armed Forces that meet the requirements for budget optimization and rationalization of the operation of State aircraft. SDTS has a proven and extensive experience in Air-Air, Air-Ground or Air-
